Instr	ument: Informed Consent	(informed_consent)	
10	[rfinst1]	***DO NOT INCLUDE IN PRODUCTION DATABASE*** Informed consent/assent has been removed from the demographics form and added to its own form that is now set to repeatable. The intent of this repeating form is to document each time consent and/or assent is signed throughout the conduct of the study. The two fields on this form are intended to document the site under which the consent/assent was signed. Though infrequent, it is possible for a participant to transfer sites and the only way to capture which site the consent/assent was signed under is by using these variables. They will default to the DAG that the record is currently assigned. The site can change this if needed to accommodate the above-mentioned scenarios. It is imperative that the "Unique group name" value from the DAGs in your project is used as the coded value in your dropdown list to ensure the DEFAULT action tag works properly. Test this thoroughly. Lastly, remove all sites from the list that ARE NOT a part of the study being built. For example, if only CCHMC and CHOP are sites in the study, all other sites should be removed from the picklist.	descriptive Field Annotation: @HIDDEN
11	[rficloc]	What is the site location for which this Informed Consent/Parental Permission/Assent was signed?WARNING:	dropdown (autocomplete), Required 1 Site 1

		This field will default to the site the record is assigned to, and it should only ever be changed if the documentation was - for any reason - collected and signed at another site in the study.	2 Site 2 3 Site 3 4 Site 4 5 Site 5 6 Site 6 7 Site 7 8 Site 8 9 Site 9 10 Site 10 Field Annotation: @DEFAULT='[record-dag-name]'
12	<pre>[rficconf] Show the field ONLY if: [rficloc]<>"</pre>	Please check this box to indicate that the site listed above is correct:	checkbox, Required 1 rficconf1 By checking this box, I am confirming the site listed above is correct.
13	[rfinst4]	***DO NOT INCLUDE IN PRODUCTION DATABASE*** If the study will NOT have minor participants, it is admissible to remove the "or Parental Permission" portion of the first checkbox option below as well as the other fields in which parental permission is referenced in the labels or options (e.g., [rficloc] above).	descriptive Field Annotation: @HIDDEN
14	[rftype]	Please select the appropriate option(s) for documentation to	checkbox, Required

Please record the date in MM-DD-YYYY format.	text (date_mdy, Max: today), Required Field Annotation: [dscat][dssdtc] [BL: Display if "Please check this box to indicate that the site listed above is correct:" is checked and "Please select the appropriate option(s) for documentation to record:" is Consent or Parental Permission Form]
16	[rficwho] Show the field ONLY if: [rficconf(1)]='1' and [rftype(1)] ='1'	Who signed consent or parental permission?	radio, Required 1 Study Participant/Self 2 Parent/Legal Guardian Field Annotation: [BL: Display if "Please check this box to indicate that the site listed above is correct:" is checked and "Please select the appropriate option(s) for documentation to record:" is Consent or Parental Permission Form]
17	[rfinst2]	***DO NOT INCLUDE IN PRODUCTION DATABASE*** The consent version AND parental permission variables below are set to a drop-down; however, only the possible versions of each should be available in the dropdown based on the site identified. ADDITIONALLY, each site in the study should have its own consent and/or parental permission version variable(s). This is due to the fact that each site will have its own unique combinations. Thus, if a site has had 3 versions of consent and two versions of parental permission, and another has had 5 and 3, the sites should ONLY see the options that apply based on the site indicated in the question at the top of the form. Because of this, ensure the branching logic is appropriate for each site-specific variable so that the correct options are being displayed based on site. If new versions of the consent or parental permission are released for ANY site, a Change Request must be initiated to add the new version to the dropdown list that corresponds to that site. The dropdown list below is designed with the intention that the consent form for the sites will have a unique Version AND Effective/Approval	descriptive Field Annotation: @HIDDEN

		Date combination and thus they were combined into one field to eliminate unnecessary variables. If it is determined that a site's consent does not have both of these components, at least one (version or date) of them must be readily available for the site to select and the dropdown list specific to that site should reflect this. Lastly, it is known that some studies may have sites in which assent/parental permission/consent are all combined into one document (most ideal), and others in which a site might have separate documents for all three. The DMCC DM team must work with the study team and DMCC project managers to make these determinations in order to properly flesh out this form. Remember that assent versions are not required to be documented because assent does not document data use and storage elections, whereas consents and parental permissions may.	
18	[rficvr01] Show the field ONLY if: [rficconf(1)]='1' and [rftype(1)] ='1' and [rficwho]='1'	What was the Version/Date of the informed consent that was signed?	dropdown (autocomplete), Required 1 Version 1, Dated: 10DEC2021 (**Example ICF**) Field Annotation: [BL: Display if "Please check this box to indicate that the site listed above is correct:" is checked and "Please select the appropriate option(s) for documentation to record:" is Consent or Parental Permission Form and "Who signed consent or parental permission?" is Study Participant/Self]
19	[rfppvr01] Show the field ONLY if: [rficconf(1)]='1' and [rftype(1)] ='1' and [rficwho]='2'	What was the Version/Date of the parental permission form that was signed?	dropdown (autocomplete), Required 1 Version 1, Dated: 10DEC2021 (**Example PPF**) Field Annotation: [BL: Display if "Please check this box to indicate that the site listed above is correct:" is checked and "Please select the appropriate option(s) for documentation to record:" is Consent or Parental Permission Form and "Who signed consent or parental permission?" is Parent/Legal Guardian]

22	[rfinst3]	section Header: Storage and Use of Samples or Data in Other Research Studies ***DO NOT INCLUDE IN PRODUCTION DATABASE*** This section should be updated to reflect the version-specific data use elections in the consent and/or parental permission form and branching logic should be used to show the correct questions based on the version selected above. (The current questions are simply examples.) These will be found in the informed consent forms/parental permission forms for the sites participating in the study. Any changes to any questions post-production should result in the creation of a new variable to document the new question text/label and to ensure historical responses for previous versions are not impacted. In some studies, there may not be any data use restrictions or elections. If this is the case, this section can be removed altogether; retain the variable RFDESC1 at that bottom (this should always be present). The options available in the fields below are examples ONLY and should be updated accordingly for the study. Note that is completely acceptable to "reuse" a question insofar as that question is posed exactly the same across/between versions determining the branching logic.	descriptive Field Annotation: @HIDDEN

Instr	ument: Medical History Sp	ecific (medical_history_specific)	
95	[mhinst1]	***DO NOT INCLUDE THIS FIELD WITH PRODUCTION DATABASES*** This form is to be used as a template when studies require specific Medical History questions to be asked. If studies collect open-ended Medical Histories, use the other available template and create it as a repeating form. If both are used, that is acceptable. Notes on Setup: Where applicable, the following variables should be repeated for each specific Medical History Question and should be numbered such that the variables are linked to one Medical History Diagnosis: mhoccur01, mhcat01, mhterm01, mhstdat1, mhongo01, mhendat1. Subsequent variables would end in 02, then 03, etc. Additional variables can be added but should follow the numbering scheme so that data can be linked. For the "mhoccur" variables, insert the diagnosis term as defined in the SNOMED ontology. E.g., "History of Headache?" For the "mhcat" variables, use the @CALCTEXT action tag to insert one of the categories defined in the "mhcat" variable on the General Medical History template, as applicable. E.g. The category for "Headache" would be "Neurologic." For the "mhterm" variables, use the @CALCTEXT action tag to insert the SNOMED code associated with the Medical History Question being asked. E.g. If you were asking about "Headache," the SNOMED code should be "25064002."	descriptive Field Annotation: @HIDDEN

189	[lbhinst1]	***DO NOT INCLUDE THIS FIELD WITH PRODUCTION DATABASES*** If the study is utilizing a central lab, the table of results, normal range fields, and "Not Done" checkboxes can be removed. This information would be transferred electronically and does not need to also be entered into the clinical database. For data cleaning purposes, ranges should be set (as applicable) on the results fields based on PI/Sponsor instruction/feedback. The normal ranges (high/low fields) provided by the local lab may differ from the sponsor-defined data quality ranges for which they wish to flag results. For tests with results or ranges with special characters (e.g., < 5, >100, etc.), check with the sponsor, PI, or statistician on how they want to handle them (e.g., omitting special characters and only entering the numeric component, retaining the special character, etc.). The unit of measure for each parameter should be hardcoded into the field label. We have purposefully left these out of the template because some studies choose to use SI units and others may use Imperial units. Disclaimer: The tests listed below are just an example of possible tests and their results that can apply and are not meant to be exhaustive. The Data Manager will want to work with the project team and the protocol to determine which tests will be performed and recorded in the clinical database. In addition, different labs may provide results differently for some tests. As such, ensure that the data format and ranges for these tests are reviewed and modified to meet the study protocol needs. If the study has multiple sites and multiple local labs will be used, greater consideration may need to be taken to accommodate the collection of the data. Note: Normal Range high and low variables should be provided/added for any continuous results variables (i.e., quantitative variables that collect a numeric result). Noncontinuous results variables that collect a numeric result). Noncontinuous results variables (i.e. qualitative variables) may only provide a result and	descriptive Field Annotation: @HIDDEN

286 [lbcinst1] ***DO NOT INCLUDE THIS FIELD WITH PRODUCTION descriptive DATABASES*** If the study is utilizing a central lab, the table of Field Annotation: @HIDDEN results, normal range fields, and "Not Done" checkboxes can be removed. This information would be transferred electronically and does not need to also be entered into the clinical database. For data cleaning purposes, ranges should be set (as applicable) on the results fields based on PI/Sponsor instruction/feedback. The normal ranges (high/low fields) provided by the local lab may differ from the sponsor-defined data quality ranges for which they wish to flag results. For tests with results or ranges with special characters (e.g., < 5, >100, etc.), check with the sponsor, PI, or statistician on how they want to handle them (e.g., omitting special characters and only entering the numeric component, retaining the special character, etc.). The unit of measure for each parameter should be hardcoded into the field label. We have purposefully left these out of the template because some studies choose to use SI units and others may use Imperial units. Disclaimer: The tests listed below are just an example of possible tests and their results that can apply and are not meant to be exhaustive. The Data Manager will want to work with the project team and the protocol to determine which tests will be performed and recorded in the clinical database. In addition, different labs may provide results differently for some tests. As such, ensure that the data format and ranges for these tests are reviewed and modified to meet the study protocol needs. If the study has multiple sites and multiple local labs will be used, greater consideration may need to be taken to accommodate the collection of the data. Note: Normal Range high and low variables should be provided/added for any continuous results variables (i.e., quantitative variables that collect a numeric result). Noncontinuous results variables (i.e. qualitative variables) may only provide a result and thus do not have a high or low "range." 451	[lbcinst2]	***DO NOT INCLUDE THIS FIELD WITH PRODUCTION DATABASES*** If the study is utilizing a central lab, the table of results, normal range fields, and "Not Done" checkboxes can be removed. This information would be transferred electronically and does not need to also be entered into the clinical database. For data cleaning purposes, ranges should be set (as applicable) on the results fields based on PI/Sponsor instruction/feedback. The normal ranges (high/low fields) provided by the local lab may differ from the sponsor-defined data quality ranges for which they wish to flag results. For tests with results or ranges with special characters (e.g., < 5, >100, etc.), check with the sponsor, PI, or statistician on how they want to handle them (e.g., omitting special characters and only entering the numeric component, retaining the special character, etc.). The unit of measure for each parameter should be hardcoded into the field label. We have purposefully left these out of the template because some studies choose to use SI units and others may use Imperial units. Disclaimer: The tests listed below are just an example of possible tests and their results that can apply and are not meant to be exhaustive. The Data Manager will want to work with the project team and the protocol to determine which tests will be performed and recorded in the clinical database. In addition, different labs may provide results differently for some tests. As such, ensure that the data format and ranges for these tests are reviewed and modified to meet the study protocol needs. If the study has multiple sites and multiple local labs will be used, greater consideration may need to be taken to accommodate the collection of the data. Note: Normal Range high and low variables should be provided/added for any continuous results variables (i.e., quantitative variables that collect a numeric result). Noncontinuous results variables (i.e. qualitative variables) may only	descriptive Field Annotation: @HIDDEN
