Instrument: Informed Consent (informed_consent)																								
	10	[rfinst1]	***DO NOT INCLUDE IN PRODUCTION DATABASE*** Informed consent/assent has been removed from the demographics form and added to its own form that is now set to repeatable. The intent of this repeating form is to document each time consent and/or assent is signed throughout the conduct of the study. The two fields on this form are intended to document the site under which the consent/assent was signed. Though infrequent, it is possible for a participant to transfer sites and the only way to capture which site the consent/assent was signed under is by using these variables. They will default to the DAG that the record is currently assigned. The site can change this if needed to accommodate the above-mentioned scenarios. It is imperative that the "Unique group name" value from the DAGs in your project is used as the coded value in your dropdown list to ensure the DEFAULT action tag works properly. Test this thoroughly. Lastly, remove all sites from the list that ARE NOT a part of the study being built. For example, if only CCHMC and CHOP are sites in the study, all other sites should be removed from the picklist.	descriptive Field Annotation: @HIDDEN @HIDDEN-PDF																				
	11	[rficloc]	What is the site location for which this Informed Consent/Parental Permission/Assent was signed? WARNING: This field will default to the site the record is assigned to, and it should only ever be changed if the documentation was - for any reason - collected and signed at another site in the study.	dropdown (autocomplete), Required <table><tr><td>1</td><td>Site 1</td></tr><tr><td>2</td><td>Site 2</td></tr><tr><td>3</td><td>Site 3</td></tr><tr><td>4</td><td>Site 4</td></tr><tr><td>5</td><td>Site 5</td></tr><tr><td>6</td><td>Site 6</td></tr><tr><td>7</td><td>Site 7</td></tr><tr><td>8</td><td>Site 8</td></tr><tr><td>9</td><td>Site 9</td></tr><tr><td>10</td><td>Site 10</td></tr></table> Field Annotation: @DEFAULT="[record-dag-name]"	1	Site 1	2	Site 2	3	Site 3	4	Site 4	5	Site 5	6	Site 6	7	Site 7	8	Site 8	9	Site 9	10	Site 10

1	Study Participant/Self							
2	Parent/Legal Guardian							
	17	[rfinst2]	***DO NOT INCLUDE IN PRODUCTION DATABASE*** The consent version AND parental permission variables below are set to a drop-down; however, only the possible versions of each should be available in the dropdown based on the site identified. ADDITIONALLY, each site in the study should have its own consent and/or parental permission version variable(s). This is due to the fact that each site will have its own unique combinations. Thus, if a site has had 3 versions of consent and two versions of parental permission, and another has had 5 and 3, the sites should ONLY see the options that apply based on the site indicated in the question at the top of the form. Because of this, ensure the branching logic is appropriate for each site-specific variable so that the correct options are being displayed based on site. If new versions of the consent or parental permission are released for ANY site, a Change Request must be initiated to add the new version to the dropdown list that corresponds to that site. The dropdown list below is designed with the intention that the consent form for the sites will have a unique Version AND Effective/Approval Date combination and thus they were combined into one field to eliminate unnecessary variables. If it is determined that a site's consent does not have both of these components, at least one (version or date) of them must be readily available for the site to select and the dropdown list specific to that site should reflect this. Lastly, it is known that some studies may have sites in which assent/parental permission/consent are all combined into one document (most ideal), and others in which a site might have separate documents for all three. The DMCC DM team must work with the study team and DMCC project managers to make these determinations in order to properly flesh out this form. Remember that assent versions are not required to be documented because assent does not document data use and storage elections, whereas consents and parental permissions may.	descriptive Field Annotation: @HIDDEN @HIDDEN-PDF

			permission form and branching logic should be used to show the correct questions based on the version selected above. (The current questions are simply examples.) These will be found in the informed consent forms/parental permission forms for the sites participating in the study. Any changes to any questions post-production should result in the creation of a new variable to document the new question text/label and to ensure historical responses for previous versions are not impacted. In some studies, there may not be any data use restrictions or elections. If this is the case, this section can be removed altogether; retain the variable RFDESC1 at that bottom (this should always be present). The options available in the fields below are examples ONLY and should be updated accordingly for the study. Note that is completely acceptable to "reuse" a question insofar as that question is posed exactly the same across/between versions determining the branching logic.

	188	[lbhinst1]	***DO NOT INCLUDE THIS FIELD WITH PRODUCTION DATABASES*** If the study is utilizing a central lab, the table of results, normal range fields, and "Not Done" checkboxes can be removed. This information would be transferred electronically and does not need to also be entered into the clinical database. For data cleaning purposes, ranges should be set (as applicable) on the results fields based on PI/Sponsor instruction/feedback. The normal ranges (high/low fields) provided by the local lab may differ from the sponsor-defined data quality ranges for which they wish to flag results. For tests with results or ranges with special characters (e.g., < 5, >100, etc.), check with the sponsor, PI, or statistician on how they want to handle them (e.g., omitting special characters and only entering the numeric component, retaining the special character, etc.). The unit of measure for each parameter should be hardcoded into the field label. We have purposefully left these out of the template because some studies choose to use SI units and others may use Imperial units. Disclaimer: The tests listed below are just an example of possible tests and their results that can apply and are not meant to be exhaustive. The Data Manager will want to work with the project team and the protocol to determine which tests will be performed and recorded in the clinical database. In addition, different labs may provide results differently for some tests. As such, ensure	descriptive Field Annotation: @HIDDEN @HIDDEN-PDF						

			that the data format and ranges for these tests are reviewed and modified to meet the study protocol needs. If the study has multiple sites and multiple local labs will be used, greater consideration may need to be taken to accommodate the collection of the data. Note: Normal Range high and low variables should be provided/added for any continuous results variables (i.e., quantitative variables that collect a numeric result). Non-continuous results variables (i.e. qualitative variables) may only provide a result and thus do not have a high or low "range."

	450	[lbcinst2]	***DO NOT INCLUDE THIS FIELD WITH PRODUCTION DATABASES*** If the study is utilizing a central lab, the table of results, normal range fields, and "Not Done" checkboxes can be removed. This information would be transferred electronically and does not need to also be entered into the clinical database. For data cleaning purposes, ranges should be set (as applicable) on the results fields based on PI/Sponsor instruction/feedback. The normal ranges (high/low fields) provided by the local lab may differ from the sponsor-defined data quality ranges for which they wish to flag results. For tests with results or ranges with special characters (e.g., < 5, >100, etc.), check with the sponsor, PI, or statistician on how they want to handle them (e.g., omitting special characters and only entering the numeric component, retaining the special character, etc.). The unit of measure for each parameter should be hardcoded into the field label. We have purposefully left these out of the template because some studies choose to use SI units and others may use Imperial units. Disclaimer: The tests listed below are just an example of possible tests and their results that can apply and are not meant to be exhaustive. The Data Manager will want to work with the project team and the protocol to determine which tests will be performed and recorded in the clinical database. In addition, different labs may provide results differently for some tests. As such, ensure that the data format and ranges for these tests are reviewed and modified to meet the study protocol needs. If the study has multiple sites and multiple local labs will be used, greater consideration may need to be taken to accommodate the collection of the data. Note: Normal Range high and low variables should be provided/added for any continuous results variables (i.e., quantitative variables that collect a numeric result). Non-continuous results variables (i.e. qualitative variables) may only provide a result and thus do not have a high or low "range."	descriptive Field Annotation: @HIDDEN @HIDDEN-PDF

Instrument: WG / UNICEF Child Functioning Module - Ages 5-17 years (Disability) (wg_unicef_child_functioning_module_ages_517_years)																
	1467	[wgcm5des]	The Washington Group / UNICEF Child Functioning Module (CFM) - Ages 5-17 years This module was designed specifically to collect information on children aged 5-17 years, with a knowledgeable proxy respondent providing information for each child. In some cases, older children may be able to respond for themselves.	descriptive												
	1468	[wgcf15]	Section Header: <i>Interviewer read: "I would like to ask you some questions about difficulties your child may have."VISION</i> CF1. Instrument: Substance Use (substance_use)										
	1504	[suinst01]	TEMPLATE IMPLEMENTATION NOTE (Not for production use) This template supports flexible configuration depending on study design. "Substance Name" (SUTRT) and "Substance Category" (SUCAT) may be prepopulated and set to hidden using @DEFAULT and @READONLY when a study focuses on a specific substance (e.g., Tobacco). Sponsors may define SUCAT using sponsor-controlled terminology (e.g., TOBACCO, ALCOHOL, CAFFEINE) when appropriate for the study. If the study collects more than one substance (e.g., Tobacco, Alcohol), CDASH base variable names may be extended with a sponsor-defined suffix for clarity and uniqueness (e.g., sutrt_tobacco, sutrt_alcohol). The base variable remains aligned to CDASH SUTRT and should continue to map to SDTM SU.SUTRT. If detailed tobacco products are collected (e.g., CIGARETTES, CIGARS rather than TOBACCO): SUCAT should be set to TOBACCO. SUTRT should contain the detailed product value. If SUCAT = TOBACCO, SUTRT may be configured as a sponsor-defined codelist such as: CIGARETTES E-CIGARETTES CIGARS PIPE SMOKELESS TOBACCO · When possible, the options for dose/amount/frequency are preprinted on the CRF. This section is for template configuration guidance only and must be removed or hidden prior to study activation.	descriptive Field Annotation: @HIDDEN @HIDDEN-PDF						
	1505	[sutrt]	Reported Name of Substance:	text, Required Field Annotation: SDTM=SU.SUTRT Origin=CRF						
	1506	[sucat]	Category for Substance Use: <i>Prepopulated</i>	text, Required Field Annotation: SDTM=SU.SUCAT Origin=CRF						

	1507	[suncf]	Has the subject ever [used/consumed] [SUTRT/SUCAT]?	radio, Required <table><tr><td>1</td><td>Current</td></tr><tr><td>2</td><td>Previous</td></tr><tr><td>0</td><td>Never</td></tr></table> Field Annotation: SDTM_Derive=SU.SUOCCUR; SUSTRTPT; SUSTRF; SUENRTPT; SUENRF; QVAL Origin=CRF CT=CDASH.SUNCF The 3 options (NEVER, CURRENT, FORMER) are sponsor-defined in relation to the protocol. If the sponsor has specific definitions, these definitions are detailed in the instructions to the site. As this type of response does not correspond exactly to an SDTM variable, CDASH recommends using the CDASHIG variable SUNCF. Sponsors must decide how to populate the appropriate relative timing variables when creating the SDTM-based datasets. For example, If SUNCF ="Never", the value of SUOCCUR will be "N" and all relative timing variables will be null. If the sponsor chooses to populate the relative start references (SUSTRTPT, SUSTRF) the value will be "BEFORE" when SUNCF= "CURRENT" and "FORMER". If the sponsor also chooses to use relative end references (SUENRF, SUENRTPT) , the SUENRTPT value will be "ONGOING" when SUNCF="CURRENT" while the value of SUENRF will be "DURING/AFTER". \nNote: When using SUSTRTPT and/or SUENRTPT, these must refer to a time-point anchor (e.g., SCREENING, in SUSTTPT/SUENTPT).	1	Current	2	Previous	0	Never
